```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                This DNA sequence encodes the heavy chain of humanised anti-CD23

(IgE receptor, FCERII) monoclonal antibody Cl1, composed of a human reamwork (HSIGKVII) and the heavy chain complementarity determining regions (see AAY32256-58) of murine antibody Cl1. The invention provides altered antibodies, such as chimeric or humanised antibodies, which comprise sufficient of the amino acid sequences of the Cl1 light and heavy chain complementarity determining regions to render them capable of binding to the CD23 type II molecule carpressed on heamatoppietic cells. The antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, multiple sclerosis, diabetes, uvelits, dermatitis, psorlasis, urticaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, allergies asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, eczema, graft-versus-host disease, COPD, insulitis, bronchitis (particularly chronic bronchitis) or diabetes

(particularly type I diabetes), and B-cell mailignancies (claimed). They are also useful for studying interactions between CD23 and everland and determining the binding agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300

The invention provides a human monoclonal antibody (I) and its functional fragments specifically reactive with an F protein epitope of respiratory syncytal virus (RSV), and capable of neutralizing infection by the virus such as Glambda-1A or Glambda-1B. The antibody can be expressed by standard recombinant methodology. (I) is useful for detecting RSV by whether (I) binds to the source (I) is also useful for providing passive hether (I) binds to the source (I) is also useful for prophylactically, to RSV disease in a human. (I) is useful for therapeutic and/or prophylactic treatment of RSV infection in human patients, particularly infants and young children. (I) is also useful as a diagnostic reagent for the determination of RSV mediated disorders or for tracking progress of treatment of the disorders. The present account of the disorders. The present the continuous DNA sequence of the coding region of

AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; human colon cancer antigens can be used in gene therapy, gynaecological, gastrointestinal, can be used in gene therapy. The colon cancer antigen polynuclectides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynuclectides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neutral disorders, immune system disorders, muscular disorders, reproductive disorders, immune gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAC98707 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ed gene sequences, referred to as colon cancer the treatment, prevention, and diagnosis of colon

from macaque. This sequence is used in a method which studies new monoclonal antibodies (MAb's) that bind selectively to B7:1 (CDB0) or to Mab's are specific immunosuppressants for treatment of diseases involving T cell/B cell interactions, particularly autoimmune disease, specifically didopathic thrombocytopaenia purpura, systemic lupus erythematosus, type I diabetes mellitus, rheumatoid arthritis, psoriasis, aplastic anaemia, inflammatory bowel disease, alleryy and multiple sclerosis, graft vs. host diseases, B cell lymphoma, infections (including by human immune MAb can be conjugated to a drug or toxin. MAb's, or their fragments, can also be used as imaging agents and a vaccines or immunogens to develop anti-idotype reagents. MAb's are optionally complined with other proteins anti-idotype reagents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or small molecule immunosuppressants. Blocking B7/CD28 interactions induces long-term, artigen-specific immunosuppression, i.e. it inhibits production of interleukin-2 (IL-2), T cell proliferation and antigen-specific immunoglobulin G (IGG) responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence encodes a primatized form of the antibody 7B6 heavy chain
                                                                                                                                                                                                                                                                                                                                      Monoclonal antibody; Mab; macaque; heavy chain; primate; antigen; CD80;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New monoclonal antibodies specific for B7.1 or B7.2 antigens and inhibiting binding to CD28 - useful as specific immunosuppressants for treating diseases that involve interactions between T and B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 329 A; 451 C; 387 G; 270 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a new use of a monoclonal antibody which specifically binds to B7.1 antigen (CD80) and/or B7.2 antigen (CD86) for inducing the apoptosis of B7+ cells. The invention is useful for treating diseases such as B cell cancer, lymphoma, a cancer where B cells promote the growth and/or metastasis of tumours, B cell lymphoma; B cell leukaemia, and autoimmune diseases such as idiopathic thrombocytopenia purpura, systemic lupus, erythematosus,
                                                                                                                                                                                                                                                                                                                                                            sequence of a primatised form of the heavy chain of 786 antibody

anaemia, inflammatory bile disease, allery, multiple sclerosis or graft-vs-host disease. The antibody is useful for immunosuppression in a human or animal and for treating or preventing resistance to or rejection of transplanted organ or tissue for treating proliferative and hyperproliferative diseases, for treating reversible obstructive airways disease, intestinal inflammations and allergies e.g. Crohn's disease and ulcerative colitis, food-related allergies e.g. migraine, rhinitis and eczema, and other types of allergies. The present nucleic acid sequence encodes the heavy chain of 786, a primatised antibody used in the invention to induce apoptosis.

2 DNA sequences (AAT62511 and AAT13847) respectively code for primatised forms (AAW01819) and AAW01820) of the light and heavy chains of cynomolgus monkey anti-human B7.1 antigen monoclonal antibody 7B6. Cloned 7B6 light and heavy variable genes are inserted into an expression vector (pref. NEOSPLA) which contains human light and heavy chain constant region genes to allow prodn. of primatised antibody in e.g. CHO cells. Primatised 7C10 and 16C10 anti-B7.1 antibodies have also been produced (see also AAW01817-18 and AAW01821-22). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders and graft-versus-host disease.

The present invention relates to the isolation of novel CDNA sequences which encode human secreted proteins. The CDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynuclectide sequences. The proteins are useful for identifying compounds that modulate their activity and production, and the cell is also useful for identifying compounds that modulate expression of the polynuclectide sequences encoding the secreted proteins. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. rhe polynuclectide sequences of the invention are also useful in gene therapy, AASSC2214-AASSC2838 represent the CDNA sequences of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   producing human MAbs specific for the gp120 V3 loop of HIV-1 MN isolate were obtained. MAb 447-52D was found to recognise the tetrapeptide motif GPGK, i.e. the Principal Neutralising Determinant common to the V3 loop of different HIV isolates. A recombinant Ab was produced in which the H chain V region was derived from 447-52D and to which a signal sequence and a H chain intronic sequence are appended, fused to a fragment contg. a short intronic segment of the human gamma I C region and the human gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            181 CATTATGCGGAGTCTGTGAAGGGGAAATTCACCATCTCAAGAGATGATCAAAATCTAGA

The invention provides a human monoclonal antibody (I) and its functional fragments specifically reactive with an F protein epitope of respiratory syncytial virus (RSV), and capable of neutralizing infection by the virus such as Glambda-IA or Glambda-IB. The antibody can be expressed by standard recombinant methodology. (I) is useful for detecting RSV by contacting a source suspected of containing RSV with (I) and determining whether (I) binds to the source. (I) is also useful for providing passive for therapeutic and/or prophlactic treatment of RSV infection in human patients, particularly infants and young children. (I) is also useful as a diagnostic reagent for the determination of RSV infection in human as a diagnostic reagent for the determination of RSV mediated disorders or for tracking progress of treatment of the disorders. The present sequence represents the continuous DNA sequence of the expression plasmid common and a sequence of the expression plasmid the manner of the described on the containing the RSV neutralising human Glambda-I mAb for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        therapeutic and/or proph/lactic treatment of respiratory syncytial virus infection, is specifically reactive with the F protein epitope of

beta-glucuronidase (GUS) gence, firefly luciferase gene, an inactivated Salmonella typhimurium histidinol dehydrogenase (HisD) gene and transposon Tno neomycin phosphorransferase (neo) gene and transposon Tno neovel method for integrating a desired exognecus DNA at a target site within the genome of a manmalian cell with a "marker plasmid' such as Desmond (see Aav61792), which contains a unique sequence that is foreign to the mammalian cell with a marker plasmid, such as Desmond (see Aav61792), which contains a unique sequence that is foreign to the mammalian cell genome and which provides a substrate for homologous recombination with a 'target plasmid', such as Manny or Molly (see Aav61793), containing a sequence which provides for homologous recombination with the unique sequences contained in the marker plasmid, and further comprising a desired DNA that is to be integrated into the mammalian cells, typically an immunoglobulin or other secreted mammalian glycoprotein. The homologous recombination system utilises the neo gene as a dominant selectable marker. The neo gene is split into 3 exons.

Exon 3 is present on the marker plasmid and becomes integrated into the mammalian cells. Exons I and 2 are present on the cargeting plasmid, and are separated by an intron into which at targeting plasmid, and are separated by an intron into which at least one gene of integrated marking vector results in correct splicing of all 3 exons of the neo gene and expression of the targeting of an health of express any type of recombinant mammalian cells. The method is applicable to all and an express any type of recombinant the mammalian cells. The method is applicable to all and can be an express any type of recombinant the mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9489 GAGGTGCAGCTGGTGGAGCTCTGGGGGGGGGCTTGGCAAAGCCTGGGGGGTCCCTGAGACTC 9548

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             24; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              mammalian cells, and can be used to express any type of recombinant protein. The use of a triply spliced selectable marker means that all selected colonies arise from homologous recombination. In addition, the number of colonies that need to be screened to identify high producer clones is reduced. An amplifiable gene can be inserted on integration of the marking vector, so that when a gene is targeted to this site, the gene is further enhanced by gene
                                                                                                                                                                                                               The plasmid includes an inactivated murine dihydrofolate reductase (PIRFN) gene, the Escherichia coli beta-galactosidase gene, baculovirus DNA, a cassette comprising the promoter and enhancer elements from cytomegalovirus and 8V40 virus, the E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9609 CAGGCTCCAGGGCAGGGGCTGGAGTGGGTCTCACGTATTAG-----TAGTAGTGGTGAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GAGGTGCAGCTGGAGTCTGGGGAGGCTTGGTAAAGCCCGGGGGGTCCCTTAGACTC

coding region for anti-respiratory syncytial virus (RSV) fusion

(F) protein human monoclonal antibody (MAD) Hu19C heavy chain (see also AAM59617). Hu19Ctopen (see AAV41433) encoding the Hu19C light chain is also provided. These vectors were used to produce Hu19C in transfected COS and CHO cells. Hu19A, Hu19B, Hu19C and Hu19D MADS are claimed. These are reshaped human antibodies comprising a heavy chain selected from 19A, 19B, 19C or 19D (see AAM59615-18), and a light chain selected from 19A, 19B, 19C or 19D (see AAM59615-18). These are neutralising engineered antibodies that inhibit virus growth in viro and in vivo in animal models of RSV infection. They can be used in the detection, prevention and passive immunotherapy of RSV infection. Nucleic acids encoding the human MaDs, recombinant plasmids (see AAV41427-33) and host cells are provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CGTGTGCAGCCTCTGGAACCACCCTCAGTGGCTATACCATGCACTGGGTCCGCCAGGCTC 190

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Qγ
```

```
This is the DNA sequence of plasmid Hul9DHcpcd, which includes a coding region for anti-respiratory syncytial virus (RSV) fusion (F) protein human monoclonal antibody (MAb) Hul9D heavy chain (see also AAM59618). Hul9CLcpcn (see AAV41433) encoding the Hul9C light chain is also provided. These vectors were used to produce Hul9C in transfected COS and CHO cells. Hul9A, Hul9B, Hul9C and Hul9D. Mabs are claimed. These are reshaped human antibodies comprising a heavy chain selected from 19A, 19B, 19C or 19D (see AAM59615-18), and a light chain selected from 19A, 19B, 19C or 19D (see AAM59610-11). These are neutralising engineered antibodies that inhibit virus growth in vitro and in vivo in animal models of RSV infection. They can be used in the detection, prevention and passive immunotherapy of RSV infection. Nucleic acids encoding the human whas, recombinant plasmids (see AAV41427-33) and host cells are

Hul9BLcpcn (see AAV41430) encoding the Hul9B light chain is also provided. These vectors were used to produce Hul9B in transfected COS and CHO cells. Hul9A, Hul9B, Hul9C and Hul9D MADs are claimed. These are reshaped human antibodies comprising a heavy chain selected from 19A, 19B, 19C or 19D (see AAW59615-18), at

a light chain selected from 19A, 19B, 19C or 19D (see AAW59620-21. These are neutralising engineered antibodies that inhibit virus growth in vitro and in vivo in animal models of RSV infection. They can be used in the detection, prevention and passive immunotherapy of RSV infection. Nucleic acids encoding the human MADs, recombinant plasmids (see AAV41427-33) and host cells are provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            191 CAGGGAAGGGGCTGGAGTGGGTCTCATCCATT-----ACTGGAGGTAGCAACTTCATAA

derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynuclectide sequences. The proteins are useful for identifying compounds that modulate their activity and production, and the cell is also useful for identifying compounds that modulate expression of the polynuclectide sequences compounds that modulate expression of the polynuclectide sequences compounds that modulate expression of the polynuclectide sequences compounds that modulate expression of the polynuclective disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. thrombocytopaenia), inflammatory colisorders (e.g. thrombocytopaenia), inflammatory alsorders (e.g. arthritis) and infectious disorders (e.g. hepatitis). The polynuclectide sequences of the invention are also useful in gene invention that encode for novel human secreted proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 242
